RESEARCH INTERESTS

Representation & Self-Supervised Learning · World Models & Embodied AI · 3D Computer Vision & Geometric Deep Learning

RESEARCH EXPERIENCE

AI Research Intern — Siemens AG

Apr. 2026 – Sept. 2026

Dept. Foundational Technologies

Munich, Germany

- Conducting research in Geometric Deep Learning and 3D Vision within the Digital Manufacturing Technologies Research Group.
- Designing a novel Self-Supervised Representation Learning framework for Boundary-Representation (BRep/3D CAD models) built on a Joint-Embedding Predictive Architecture (JEPA).
- Built a geometry encoder over a geometric Attributed Adjacency Graph, coupling Cross-Scale Mutual Attention with edge-aware Message Passing (Graph Transformer); benchmarked an enhanced Point Transformer v3 (Utonia) as alternative encoder.
- Reached 86.1% face accuracy on MFInstSeg with **0.1% of labels** (44 parts), **+33.6 points** over a matched from-scratch control and on par with the best publish with a 4.8× smaller encoder and an order of magnitude less pretraining data.
- Ran an instrumented ablation isolating *what latent prediction can and cannot force*.
- Engineered a geometry-driven module auto-generating PMI (GD&T tolerances & datums) from CAD geometry to automate CMM inspection planning.
- Owned the pipeline end to end — raw CAD data processing, pretraining runs, evaluation protocol, and few-shot/frozen-probe downstream benchmarks (machining-feature recognition, part segmentation & classification).

EDUCATION

PSL Research University — ENS Paris & Mines Paris & Paris-Dauphine

Sept. 2025 – Present

MSc IASD (Artificial Intelligence, Systems & Data) — Mathematics Track

Ranked 7th

- Highly selective research-oriented master in Applied Mathematics, Learning & Modeling.
- Key courses** : Reinforcement Learning · Advanced Machine Learning · Convex Optimization · Dimension Reduction and Manifold Learning · High-Dimensional Statistics · Bayesian Statistics · Optimal Transport for ML · Machine Learning with Kernel Methods · LLMs for Code & Proof · 3D Point Cloud and Modeling · Deep Learning for Computer Vision

Télécom Paris — Institut Polytechnique de Paris

Sept. 2023 – Present

Engineering Degree (MSc), Applied Mathematics & Computer Science

- Top-tier French Engineering school, Leader in the field of digital technology
- Signal Processing & Artificial Intelligence Track**: Statistics · Optimization · Time-Series Analysis · Machine Learning · Deep Learning (CNN, RNN, VAE, GAN, Transformers) · LLM · Audio & Speech processing · Databases.— **Results: 16.4/20**
- Stochastic Processes and Scientific Computing**: Martingales · Markov chains · Stochastic Processes (Brownian motion, Poisson process) · Statistical Learning · Numerical analysis (Newton, Monte-Carlo) — **Results: 14.4/20**

Preparatory Class for French Grandes Écoles — Lycée Condorcet, Paris IX

Sept. 2021 – June 2023

Scientific Track PSI* (eq. BSc. in Mathematics and Physics)

- 2-year intensive program in Mathematics & Physics; ranked top 8% nationally at the *Grandes Écoles* entrance exams.

SELECTED PROJECTS

Kernel Methods for Image Classification | [GitHub](#) | [Kaggle](#)

- Built a full CIFAR-10 classifier using only kernel methods, implemented from scratch (custom feature kernels, CKN, KRR), with no deep-learning libraries — ranked 3rd out of 44 teams on the Kaggle Data Challenge leaderboard.

GAN Latent-Space Tuning | [GitHub](#)

- Studied the precision-recall trade-off of f-GANs across JS/KL/RKL/BCE objectives; implemented Soft Truncation & Discriminator Rejection Sampling to improve post-hoc sample quality.

DeepSDF In-Depth Study — Implicit Neural 3D Shape Representation

- Reimplemented DeepSDF to learn continuous signed-distance fields as implicit neural representations of 3D geometry; used latent-code optimization for shape reconstruction & completion from partial observations.

Collaborative Filtering | [GitHub](#)

- Developed a Multiple-Kernel Matrix Factorization recommender system on scikit-learn, accelerated with Numba.

hERG Cardiotoxicity Prediction — Hackathon IBM × Qubit Pharmaceuticals × Margo | [GitHub](#)

- Finalist (Top 4/25 teams) in a 56-hour hackathon on in-silico hERG-blockade prediction from molecular structure; built an ensemble of GNN, XGBoost & ChemBERTa for toxicity prediction and Tanimoto-distance clustering.

Research Assistant — 2PAC - Asynchronous BFT Blockchain Consensus | [Paper](#) | [GitHub](#)

- Implemented & benchmarked the 2PAC consensus protocol (with Prof. M. Rambaud); stress-tested under Byzantine node corruption & network latency via socket-level simulation.

TECHNICAL SKILLS

Programming: Python · C · SQL · TypeScript · LaTeX

ML & scientific stack: PyTorch · NumPy · Pandas · scikit-learn · TensorFlow/Keras · Numba · Git

Languages: French (native) · English (full professional) · Arabic (intermediate) · German (beginner)
